

RÉMY GARDEN HOMES

Welcome to Rémy.

A garden home, inspired by European Tudor architecture. Vastness blooms across the living spaces, with ample rooms for multi-generational garden living. In the spacious private garden, beautiful flowers and verdant greenery await to make moments more mesmerising for everyone, whether it is lounging in the living hall, enjoying a meal in the dining hall, or embarking on a culinary journey in the kitchen. Day or night, dusk to dawn.

GREEN INITIATIVES

ECO ENVIRONMENT

RESPONSIBLE CONSTRUCTION

Through the right controls and plans, we have ensured that all construction activities carried out have minimal impact on the surrounding community and the environment. We take great care to keep our rivers and neighbourhoods clean.

CONSTRUCTION WASTE RECYCLING

The common practice for disposing of construction waste is to dump it into landfills. At EcoWorld, we have taken a different approach by recycling waste materials such as paper, plastic, metal and timber to reduce the impact of the development, as these materials can be valuable resources.

USING GREEN OR ECO-LABEL MATERIALS

We see the use of certified green or eco-label construction materials for our houses as the way forward. They are non-toxic, non-hazardous and harmless to the environment. Through this, we only use materials such as low-VOC paint, which has non-chemical ingredients that will promote health and well-being, for your home.

ECO PASSIVE DESIGN

BUILDING ORIENTATION

By studying the local sun path as it rises and sets from east to west, we are able to optimise a building's orientation to prevent excessive heat gains. As a result, your building is designed to ensure that its interior remains cool and comfortable throughout the day.

WINDOW DESIGN

Determining the positioning and size of the windows in a building involves finding the right balance of outside views, natural light penetration and heat gain. We have optimised your building's window design to ensure that you will be able to enjoy pleasant views and natural lighting without the unwanted heat gain.

COOL ROOF

A building's heat gain comes mostly from the roof. By using the right roofing material and insulation, heat gain that passes through the roof can be reduced.

NATURAL VENTILATION

Hot air naturally rises, which is why we have designed your home to draw in natural air while allowing hot air to escape via cross ventilation through the windows. By carefully placing your windows to face the direction of the prevailing winds, natural cooling air can be ventilated throughout your home.

RECYCLING READY

From the very beginning, we have gone the extra mile to ensure that all our townships are strategically equipped with designated recycling bins and points. In addition, we regularly organise recycling campaigns and activities to engage you, our residents, to do your bit for the environment.

NATURAL LIGHTING

There is no better way to illuminate your environment than through the natural rays of the sun. As such, we have designed the exteriors of your home to maximise daylight penetration into your home, which reduces your need to turn on the lights during the day.

ECO MASTERPLAN

GREENSCAPES & WATER BODIES

We take pride in dedicating a large percentage of our development to greenery and water areas, such as gardens and lakes. We hope to create a cooling and visually pleasant environment for all to enjoy.

PEDAL-READY

Being able to move around in your neighbourhood without having to drive is not only convenient, but also lowers the carbon footprint and is an even healthier option. We have designated cycling lanes that connect residential areas to nearby amenities, such as shops, as well as to community areas and parks within the development. Getting around is a breeze!

GREEN MOBILITY

We have also installed other alternative connectivity modes to nearby community amenities, such as a pedestrian-only path. Look forward to leisurely strolls around the neighbourhood.

ECO LANDSCAPE

BIODIVERSITY

We feel that a development without flora and fauna lacks character and beauty. In order to provide rich biodiversity, we have designed parks and rivers with plants that will attract suitable animal species, such as birds, butterflies and insects, to our townships.

LANDSCAPE IRRIGATION

EcoWorld's developments are known for their beautiful greenery and landscaping. Instead of using treated water from the local water supply, we use water from renewable sources such as ponds and lakes to water the plants in your neighbourhood. This allows for lower maintenance cost and reduces environmental impact.

NATIVE PLANTS

We believe that including native plants (local plants) in a development's environment not only provides greenery, but also maintains the natural ecosystem around a neighbourhood. These native plants usually require less maintenance and have low water requirements.
